WORK EXPERIENCE

Microsoft

Product Manager II, Microsoft AI - Edge Web Platform

Dec 2023 - Present

- Defined Edge DevTools' Chromium contribution strategy to reduce long-term maintenance burden, determining which Edge-specific capabilities to retain, retire, or contribute to the shared Chromium codebase and prototyping replacements with AI-assisted development
- Leveraged GitHub Copilot to ship 10+ production fixes across DevTools UI and telemetry, improving product quality while reducing the engineering backlog
- Drove design and collaboration with Chromium to ship 5 new DevTools features, helping web developers diagnose performance issues and debug webpages
- Launched the Microsoft Edge [origin trials portal](#) for web developers, replacing manual overhead with self-service workflows which improved third-party developer participation by 25%
- Owned the customer feedback loop for DevTools quality, triaging reported issues, coordinating fixes, and publishing monthly [What's New updates](#) for the web developer community

Product Manager, Microsoft AI - Edge Commercial

Aug 2021 - Dec 2023

- Led the GA launch and post-launch expansion of the [Microsoft Edge management service](#), defining product direction and admin workflows that simplified browser management for 8,000+ organizations
- Ran private previews with 20+ enterprise customers, translating browser-management scenarios into product requirements, engineering plans, and roadmap investments
- Drove go-to-market execution through customer demos, feedback sessions, and launch content for Microsoft Ignite and other enterprise events

Product Manager Intern, Microsoft AI - Edge Commercial

Jun 2020 - Aug 2020

- Drove UI/UX strategy for Microsoft 365 Admin Center feature development, replacing legacy administrative tools with modern user experience
- Conducted user research interviews with enterprise customers, collected feedback to improve and iterate designs, ensuring the product aligned with customer needs

EDUCATION

University of Waterloo

2016 - 2021

Bachelor of Computer Science, Business Specialization (Co-op)

ADDITIONAL INFORMATION

Technical skills: AI-assisted software development, code-based prototyping, agentic workflows, A/B experimentation

Tools: GitHub Copilot, Copilot CLI, Git, GitHub, Figma, Azure DevOps, VS Code, Power BI

Outside work: Create handmade ceramics and occasionally sell at local markets
